DYNAMIC RATING

RATING	PROBABILITY OF FAILURE	GUIDE TO INTERPRETATION
1	Minimal risk	Proceed with transaction-offer terms required
2	Low risk	Proceed with transaction
3	Greater than average risk	Proceed with transaction but monitor closely
4	Significant level of risk	Take suitable assurances before extending credit
OR NQ	Insufficient information to assign a risk indicator	No public information available to indicate trading activity

The Dynamic Rating in more detail

Strong Condition (1)

This is assigned to companies of undoubted credit standing and financial strength. The risk associated with being a creditor of these concerns would be negligible or zero, the concern which pays bills promptly or discount.

Good Condition (2)

This is assigned to financially sound concerns, having no known record of bad payments and paying suppliers quickly. The risk of being associated with being a creditor of these concerns would be low and they would be classified as an ordinary trade risk.

Fair Condition (3)

This would be assigned to concerns believed to be financially sound but with a history of slow payments or some losses or working capital deficit. The risk associated with being a creditor of these concerns is higher and would be classified as potentially slow payers or fair trade risk.

Poor Condition (4)

This would be assigned to concerns of known financial weakness. A number of years losses, higher than normal working capital deficit, a negative net worth which is worsening, court judgments, bad payments etc. This risk is associated with being a creditor of these concerns is high or significant.

Undetermined (“-“or NQ)

This is assigned to concerns where there is insufficient information available to express any opinion on the condition, financial soundness or payment or payment history of the concern. A concern with no telephone number will also be assigned a “-“condition.
